About this Guide

Thank you for choosing the SpectraLink 8020/8030 Wireless Telephones with SpectraLink Radio Protocol (SRP)\(^1\). These handsets provide business telephony features and functions such as multiple call appearances, call hold, transfer, and conference over your Local Area Network. Your handset can call other telephone numbers and extensions within your facility as well as any external telephone number. Your handset will only work within your facility when it is in contact with the LAN. It will not work beyond the coverage area of the wireless LAN. Contact your system administrator if you have questions about your facility’s boundaries.

In this User Guide, you will find everything you need to quickly use your new handset. If you have questions about features and functions customized for your facility, contact your system administrator. Please read the Safety section in this guide before you set up and use the SpectraLink 8020/8030 Wireless Telephone.

Polycom Model Numbers

This document covers the following registered model numbers:

- 802X (SpectraLink 8020 Wireless Telephone)
- 803X (SpectraLink 8030 Wireless Telephone)
- PBP0850 (Standard Battery Pack)
- PBP1300 (Extended Battery Pack)
- PBP1850 (Ultra-Extended Battery Pack)
- PCS1850 (Desktop Charger)
- PCD1850 (Dual Charger)
- PCQ1850 (Quad Charger)

---

\(^1\) SRP is Polycom’s proprietary signaling protocol used by the SpectraLink 8020/8030 Wireless Telephones to send and receive telephone calls over the telephony system installed in your facility.

Getting Started with your SpectraLink 8020/8030 Wireless Telephone

Overview

The SpectraLink 8020/8030 Wireless Telephones is a Wi-Fi handset for workplace telephone systems. By seamlessly integrating with the facility’s telephone system, wireless telephone users are provided with high-quality mobile voice communications throughout the workplace, giving users the freedom to roam throughout the workplace while providing the features and functionality of a wired desk phone.

The handsets will only work when they are within range of the wireless access points at your facility; they are not cellular or satellite phones.

Install and charge the Battery Pack before using the SpectraLink 8020/8030 Wireless Telephone. See the Battery Packs section below and Chapter 5 Charger Options.
Battery Packs

Three battery pack models are available: Standard, Extended, and Ultra-Extended. The Standard Nickel Metal Hydride (NiMH) rechargeable handset Battery Pack gives you approximately four hours of talk time or 80 hours of stand-by time. Stand-by time is when the handset is turned on, but not in an active call.

<table>
<thead>
<tr>
<th>Type</th>
<th>Talk Time</th>
<th>Standby Time</th>
<th>Charging Time</th>
</tr>
</thead>
<tbody>
<tr>
<td>Standard</td>
<td>4 hours</td>
<td>80 hours</td>
<td>2 hours</td>
</tr>
<tr>
<td>Extended</td>
<td>6 hours</td>
<td>120 hours</td>
<td>3 hours</td>
</tr>
<tr>
<td>Ultra-Extended</td>
<td>8 hours</td>
<td>160 hours</td>
<td>4 hours</td>
</tr>
</tbody>
</table>

Talk time and standby time will vary depending on handset model, call server, features enabled and system configuration. These are minimum estimates. Your experience may be significantly higher.

The type of Battery Pack is printed on the label. Remove the Battery Pack and view the label to determine the type of Battery Pack you have been issued.

Use only Battery Pack models BPL100, -200 and -300 in the SpectraLink 8020/8030 Wireless Telephones.

Indications of low battery

The handset will need to have its Battery Pack recharged periodically. The Battery Pack icon on the handset display’s status row indicates the amount of charge remaining. Additionally the handset will sound warning tones and display the Battery Low message when there are fewer than two minutes of talk time remaining.

A melody will play when the handset is powered on for the first time after being fully charged, unless this feature has been disabled. See your system administrator if you have questions about the type of Battery Pack you have been issued.

When the handset is in Standby mode, the message Battery Low and a series of chirps indicate a critically low Battery Pack charge. The handset will not work until the Battery Pack is charged.
Take care not to short the battery contacts on the Battery Pack with metal objects such as coins, keys or paper clips. Shorting the contacts can cause permanent damage.

Battery Pack removal and replacement

To remove, press down on the latch on the Battery Pack on the back of the handset. The Battery Pack releases outward.

To replace, slide the lip of the Battery Pack into the bottom of the cavity. Push the top of the Battery Pack until it snaps into place. You should not have to force it against the handset.

Notes on Battery Packs

- Battery Pack life will vary depending on handset model and features and system infrastructure.
- Maximum Battery Pack performance is achieved after a few charge/discharge cycles.
- If multiple Battery Packs are supplied with your handset, Polycom recommends that each be fully charged upon receipt to prolong battery life. Battery Packs will slowly lose charge if unused. To maintain battery potential, charge unused Battery Packs occasionally or alternate Battery Pack use.
- After a length of time Battery Packs will lose the ability to maintain a charge and to perform at maximum capacity and will need to be replaced. This is normal for all batteries.
- If your Battery Pack requires replacement, contact your system administrator.
- Overnight charging is best done while the handset is turned off.
- The handset will chirp once when properly seated in the charger to let you know that the charging cycle has begun. If the handset does not charge, clean Battery Pack, charger and handset contacts with an alcohol swab.

Only use SpectraLink Battery Packs with SpectraLink 8020/8030 Wireless Telephones.
Features of your SpectraLink 8020/8030 Wireless Telephone

The handset operates much like a cell phone, and is programmed by your system administrator to support the features commonly available in an office environment. Orient yourself to your handset’s features using the illustration below and the following explanatory material.
1. **Earpiece** — Delivers audio to the ear.

2. **Screen** — Displays information relating to the handset’s current mode. See *Handset Modes* below.

3. **Softkeys** — Four softkey buttons. A softkey label appears in the display area just above the corresponding softkey when the function assigned to that softkey is available.

4. **Headset jack** — Allows you to place and receive calls through a SpectraLink headset.

5. **Up/Down buttons** — Use these buttons to scroll through displayed menu options. Use to adjust speaker volume while in a call.

6. **Emergency Dial/TALK button** — SpectraLink 8030 only. This button may be programmed by the system administrator for either Emergency Dial or Push-to-talk (PTT) functionality. Test the active mode by pressing the button once to see which feature is active. If you are prompted to press it twice to place an emergency call, then Emergency Dial is programmed. Check the **Config** menu to determine if PTT is activated. Push and hold to activate push-to-talk mode.

7. **On hook** — Also referred to as **END**. Use to power on and power off the handset, and to end a call.

8. **Off hook** — Also referred to as **START**. Use to obtain a dial tone or place a call.

9. **Nav and Nav OK keys** — Four directional navigation keys and a **NavOK** key. Use the Nav □□ and ▲▼ keys for menu navigation. Use the **NavOK** key to select menu items, place calls, and perform softkey functions as described below in *NavOK functions*.

10. **Keypad** — 12 keys provide the 10 digits 0-9, the alphabetic characters, and special characters available in context-sensitive applications.

11. **FCN** — Press to access the Function menu; press in combination with assigned keys to access programmed system functions.

12. **LINE** — Press to access additional line appearances.

13. **Battery contacts** — Located along the bottom edge, the battery contacts enable the handset to be charged in the Desktop Charger or the Dual Charger. They should be kept clean and free of debris.

14. **Microphone** — Sensitive microphone transmits voice accurately and without distortion.
The Handset Display

When first powered on, the handset screen will display the standby screen. This screen displays a top row of system icons showing the status of the handset, followed by two lines for the handset’s extension number and name, a line for date and time display, and a bottom row for softkey labels.

While the handset is in use, display screens include:

- Call status screen
- Push-to-talk screen (8030 only, if available)
- Message screen (if available)
- Menu screens.

The standby screen has the following format:

```
<table>
<thead>
<tr>
<th>Ext. 1234</th>
<th>[Name]</th>
</tr>
</thead>
<tbody>
<tr>
<td>[date]</td>
<td>[time]</td>
</tr>
<tr>
<td>Profile:</td>
<td>[name]</td>
</tr>
<tr>
<td>[PTT channel info]</td>
<td></td>
</tr>
</tbody>
</table>
```

- **Icon row (status line)**
- Extension number
- Name assigned to extension (info line)
- Date and time if configured
- Name of the active profile
- PTT channels (8030—only if configured)
- First set of softkeys

**Second set of softkeys**

</tr>
<tr>
<td><img src="image4" alt="Speakerphone Icon" /></td>
<td>The speakerphone icon displays when the speakerphone is active.</td>
</tr>
</tbody>
</table>
## Indicator Function

**Up and down arrows are displayed when the menu has additional options above or below.**

Left or right arrows are displayed during editing when the cursor may be moved left or right.

The location service icon indicates the Real-Time Location System (RTLS) is enabled.

**Locked**

Locked indicates that the keypad is locked to prevent accidental activation. Use the **Unlk** softkey plus the # key to unlock it.

[No Service message]

If warning tones are not disabled, an alarm will sound and a descriptive message displays when the handset cannot receive or place calls. You may be outside of the covered area. Walk back into the covered area. The in-service tone indicates service is reestablished.

The download icon indicates that the handset is downloading code. This icon only appears while the handset is running the over-the-air downloader. It appears to the right of the signal strength icon in the same location as the voicemail icon.

The download failure icon indicates that the handset has failed to download code because the code is incompatible with the handset hardware. Contact your system administrator should this icon appear.

XXXX During character entry, indicates current data entry symbol mode.

## Softkeys

Certain softkeys are standard with all handsets and others are locally programmed.

Step through locally-programmed softkeys by going off-hook (press **START**) and then press the **FCN** key. The softkeys displayed while in the active mode are programmed to telephony features available in your facility. Up to 16 softkeys may be programmed and they are displayed four at a time. Press **FCN** repeatedly to step through each set.

If you have questions about any softkey not on this list, see your system administrator.

<td>Dialing</td>
<td>Place a phone call.</td>
</tr>
<tr>
<td>Answering</td>
<td>Answer a phone call</td>
</tr>
<tr>
<td>Holding</td>
<td>Resume audio.</td>
</tr>
<tr>
<td>Displaying menu</td>
<td>Select the highlighted menu option.</td>
</tr>
</tbody>
</table>

### Menus

#### Config menu

See Chapter 2 for a full description of the Config menu.
**Line menu**

The Line menu allows you to activate a call on a selected line or to view the status of lines.

Press the **LINE** key to display a menu of available lines and to activate a new call on a selected line.

The currently selected line is indicated by an asterisk (\*). Lines which have new voicemail are flagged with plus (+) characters.

Exit the Line menu display by pressing a line number key to start a new call on the selected line and put any other call on hold, or by pressing the **END** key to exit without starting a new call.

**FCN menu**

The **FCN** menu is accessible while in the active mode and provides locally-programmed features such as conference, voicemail access, transfer, etc.

Items on this menu are accessible through the **Nav ▲ ▼** keys or through shortcut keys as displayed with the menu items. Installed custom applications, such as messaging applications, are automatically added as items at the end of this menu when defined on an Open Applications Interface (OAI) server. If you have questions about the functionality of a custom application, contact your system administrator.
Handset Modes

**Standby mode (on-hook)**

In standby mode, the handset is powered on and is ready to send and receive calls. The extension number is shown on the display and there is no dial tone. In this mode, the handset is conserving battery power and bandwidth.

When an incoming call arrives, the handset rings and goes into active mode. Answer the call by pressing the **START** key. The handset will ring according to user preference as specified in the standby menus. You can silence the ringing by pressing the **END** key. The call will be redirected to voicemail if available.

**Active mode (off-hook)**

The handset is in the active mode when you are placing or receiving a call, or when the handset is in communication with the PBX.

When an incoming call occurs during an active call, the handset will play the second call ringing sound until the call is answered, the caller hangs up, or the call transfers to voicemail. If you press the **END** key, the first (active) call ends and the handset reverts to a full ring for the second call.

The active mode utilizes the most bandwidth and battery power. To conserve these resources, return the handset to the standby mode at the end of your call by pressing the **END** key.

**Push-to-talk (PTT) mode**

The SpectraLink 8030 Wireless Telephones utilizes channels for incoming and outgoing radio communication, similar to a walkie-talkie. While using this feature, the handset is in PTT mode. It can receive regular phone calls while in this mode. When a regular phone call is answered, the handset switches to active mode.
Configuration menu mode

When user preferences are being configured in the Config menu, the handset is on, but is not active. It cannot receive calls while in the Config menu. The handset will revert to standby mode if there is no activity in configuration menu mode.

Message alert mode

If text messaging functions have been programmed, as in a nurse call system, the handset is able to receive text messages. While these messages are being accessed, the handset is in message alert mode. Incoming calls will ring with the second call ringing sound.
Accessories

Carrying devices and headsets that are specifically designed for your SpectraLink handset may be purchased through your service representative.

Carrying Options

The following options are available for handset protection and easy access and carrying.

- **Belt clip**: Spring-loaded plastic belt clip that attaches to the back of the handset.
- **Swivel belt clip**: Swivel-style belt clip that attaches to the back of the handset with full 360 degree swivel or eight-position ratchet options.
- **Swivel carrying case**: Black leather case with keypad cover and swivel-style quick release belt clip.
- **Holster**: Black holster with belt clip.
- **Cord lanyard**: Nylon cord lanyard with quick disconnect.
- **Coiled lanyard**: Plastic coiled lanyard with clothing clip.

Headsets

Polycom offers optional headsets (for North America only) for use in noisy environments or if you need to have your hands free while talking on the handset.

To use the headset, simply plug it into the jack on the right side of the handset. While using a headset, the handset will ring according to the user profile setting established in the **Headset/Speaker** ring option. The external ring will ring according to the setting of the profile.

The headsets offered by Polycom have been laboratory tested and work properly with the SpectraLink 8020/8030 Wireless Telephone. Polycom does not recommend using other headsets.
When the handset is in standby mode (on but not in use), press the **Cfg** softkey to display the configuration menu (“Config menu”). The handset cannot make or receive calls while in the Config menu. This menu allows you to set user preferences and display handset information.

Check with your system administrator for specific features supported by your handset.

† (SpectraLink 8030 only) Push-to-talk must be enabled by the system administrator before it can be activated by the user. If it is not enabled, then it will not appear on the Config menu. If PTT has not been enabled, Emergency Dial may be. Check the System Info options to determine if Emergency Dial appears. If so, it is active.

‡ (SpectraLink 8030 only) Emergency Dial will appear if it has been enabled by the system administrator. The Emergency Number/Name options allow you to check the number and name that is dialed when the Emergency Dial button is pressed twice in two seconds.
Default settings

The profile options on the Config menu may be reset to their default values by the system administrator. These are the default settings:

* (8030 only) Push-to-talk must be enabled by the system administrator before it can be activated by the user. If it is not enabled, then it will not appear on the Config menu and will not be “On” for any profile.

† PTT Vibrate is available only when Push-to-talk has been enabled by the system administrator.

‡ Emergency Dial must be enabled by the system administrator. If enabled, it will be “On” (or available for use) in every profile.
**Toggle options**

Some menu items have only two options, which operate on a toggle basis. The current setting is shown below the menu heading on the info line. The other available setting is highlighted in the menu list. Press **NavOK** to activate the highlighted setting.

For example, when Predial is disabled, the info line displays **Predial Disabled** and the highlighted menu item is the **Enable Predial** option. Press **NavOK** to enable Predial. The info line will change to display **Predial Enabled**.

In another example, when the info line displays **Currently Speaker**, the highlighted menu option is **Ring in Headset**; Press **NavOK** to select **Ring in Headset**. The ring will now sound in the headset and the info line will change to **Currently Headset**.

**Lock Keys**

When enabled, the Keypad Lock option will lock the keypad immediately. If the keypad is locked, it may be unlocked by pressing the **Unlk** softkey and then the # key.

**User Profiles**

Your handset ring behavior is established by the five User Profiles: **Silent**, **Vibrate**, **Loud**, **Soft** and **Custom**. The currently-active user profile is shown on the standby display. If you want to quickly switch to a different profile, while in standby press the **Prof** softkey and select a different profile from the list. The currently-active profile is marked with an asterisk (*).

**Set as Active**

You can change to a different User Profile from the Config menu by selecting the desired profile and then selecting **Set as Active** and pressing the **NavOK** key. This activates the new User Profile.
**Ring Settings**

The Ring Settings option allows the user to set the ring for three separate functions. **Telephone Ring** is used for usual telephony functions. **Message Alert 1** and **Message Alert 2** may be used to set different ringing patterns for custom applications.

**Telephone Ring**

The telephone ring setting allows the user to set a distinctive ring rhythm, tone, volume and sequence. Select from an audible ring, a vibrate-only ring or a vibrate ring accompanied by an audible ring.

- **Ring Cadence** The ring cadence is the rhythm of the ring. It may be set to a pre-programmed ring cadence, or it may be set to obtain its cadence from the SIP proxy server. The PBX option is designed to utilize any distinctive rings sent by the proxy server while allowing the user to set unique rings for auxiliary applications.
  - **Off**: Silent
  - **PBX**: The PBX, also known as the SIP call server, determines ring cadence (e.g. the call server may send rings that differentiate between internal and external calls)
  - **Continuous**: Rings continually until answered
  - **Short Pulse**: Rings in short bursts
  - **Long Pulse**: Rings in long bursts

- **Ring Tone** Scroll and select from ten available tones. The **Play** softkey allows the user to preview the tone before selecting. If Ring Cadence is turned off, the Ring Tone option will not appear on the menu.

- **Ring Volume** Use the **Nav ▼ ▲** keys to change the Ring Volume setting, or press the up/down volume buttons on the side of the handset during ringing. If Ring Cadence is turned off, the Ring Volume option will not appear on the menu.

- **Vibrate Cadence** Vibrate Cadence options are the same as for Ring Cadence (see above).

- **Ring Delay** Ring Delay determines how long the vibrate cadence will play before the audible ring starts. If Ring Cadence is turned off, the Ring Delay option will not appear on the menu.
Message Alerts 1 and 2

Message Alerts are used by external applications such as nurse call systems. If such systems are installed in your facility, you may adjust their ring characteristics to differentiate them from other rings. Contact your system administrator to find out if these options are available.

Noise Mode

Provides options that describe the noise level in your environment. Changing this mode to **High** or **Severe** adjusts the handset’s microphone and in-ear speaker volume to account for background noise. Select **Normal** for most office environments; **High** for moderate background noise; or **Severe** for extremely noisy conditions. If you use **High** or **Severe** modes in a quiet environment, the person on the other end of the line may find it difficult to hear your voice.

**High** and **Severe** noise modes increase microphone, speaker, and ring volume settings above **Normal** mode baseline. All measures are approximate.

<table>
<thead>
<tr>
<th>Noise mode</th>

</tr>
</tbody>
</table>

Ring in Headset/Speaker

Toggle between the two options to select ring location.

Warning Tones

The handset plays various Warning Tones such as system up or down, out of range, etc. These tones may be turned on or off and are enabled by default.

Key Tones

Key Tones may be turned on or off and determine whether tones play when keys are pressed. Key Tones are enabled by default.
Phone Settings

Extension Info

The extension number and extension name are provided. These are programmed by the system administrator and may not be changed by the user.

Keypad Autolock

The handset may be set to lock the keypad automatically when in standby mode. The automatic locking function of the keypad may be disabled (the default) or adjusted for a 5, 10 or 20-second delay before locking.

Display Contrast

The display may need to be adjusted for different lighting situations. Contrast may be set by pressing the up/down buttons on the side of the handset or the \textbf{Nav} \textarrow{up, down} keys until the desired contrast is displayed.

Use Hearing Aid

The handset speaker may be set for use with a hearing aid. Toggle to set the desired option.

Startup Song Play/Inhibit

When the handset is powered up, a series of tones sounds. The Startup Song is enabled by default.

Predial

Enabling Predial allows the user to enter a phone number and then press the \textbf{START} key to initiate the call.
Predial must be enabled if you wish to use the Redial feature. See Chapter 3 Using the Basic Features of Your SpectraLink 8020/8030 Wireless Telephone for more information on using the Redial feature.

**Push-to-Talk (PTT)**

If the system administrator has configured the SpectraLink 8030 Wireless Telephones for PTT, they can be used like walkie-talkies. If the system administrator has disabled PTT, the PTT options will not appear in the Config menu.

**Default Channel**

Displays all enabled PTT channels. The default transmission channel is marked with a (*) to the left of the channel. If you wish to change the default PTT channel, use the Nav ▲▼ keys to scroll to the desired channel and press NavOK to select it.

The handset will transmit only to phones set to receive on the selected channel. The Priority Channel transmits to all channels.

**Subscribed Channels**

Displays all enabled PTT channels. The handset will receive PTT transmissions on all subscribed channels, which are marked with a (*) to the left of the channel. The handset will not receive a PTT transmission on a channel to which the user has not subscribed. If you wish to select or deselect a subscribed channel, use the Nav ▲▼ keys to scroll to the desired PTT channel and press NavOK.

**PTT Audio Volume**

Use the Nav ◀▶ keys or the up/down volume buttons on the side of the handset to adjust the PTT Audio Volume setting.

**PTT Tone Volume**

Use the Nav ◀▶ keys to adjust the PTT Tone Volume setting.
PTT Vibrate

To enhance the alerting of a PTT call, PTT Vibrate may be enabled. When PTT Vibrate is enabled, the handset will vibrate three times whenever a PTT broadcast is received, whether the handset is in standby or in a call. If in a call, the chirp alert will also sound. The vibration does not replace any PTT tone volume already set.

To set the handset for PTT vibrate only, enable PTT Vibrate and set the tone volume to zero.

System Info

Displays the IP address of the highlighted menu item. The IP address appears in the upper portion of the screen below the words System Info.

Phone IP Address

Displays the IP address currently assigned to the handset by the SVP Server.

Gateway IP Address

Displays the IP address used by the SpectraLink Telephony Gateway which operates as a call administrator between the handset and the PBX.

Firmware Version

Displays the software version running the handset. The MAC address is the hardware identification number and is set at the factory. Three code numbers correspond to the three software files that each software version uses.
Emergency Dial

(SpectraLink 8030 Wireless Telephone only)

Emergency Dial will appear if it has been enabled by the system administrator. The Emergency Number/Name options allow you to check the number and name that is dialed when the Emergency Dial button is pressed.
Using the Basic Features of your SpectraLink 8020/8030 Wireless Telephone

Your SpectraLink 8020/8030 Wireless Telephone is designed to be used like a cell phone on a public switched telephone network (PSTN).

Only one call is active at any given time. The active call has audio associated with it. There may be multiple other calls:

• On hold
• In an “Incoming call” or “Ringing” state

This chapter provides basic operating instructions for the SpectraLink 8020/8030 Wireless Telephone. This chapter contains instructions on how to:

• Turn the handset on and off
• Lock and unlock the keypad
• Place a call
• Place an emergency call
• Answer a call
• Place a call on hold
• Answer a second call
• Resume a call on hold from standby
• Redial last number dialed
• Silence the ring
• Change the ring volume
• Adjust the speaker or headset volume
• Mute/unmute a call
• End the call
• Change the profile
- Open the Config menu
- Turn on the backlight

**Turn the Handset On**

Press and hold the **END** key until two chirps sound.

**Turn the Handset Off**

Press and hold the **END** key. One chirp will sound. If you are in a call, hang up first, then turn off the handset.

**Lock the Keypad**

While in standby mode press the **Lock** softkey.

**Unlock the Keypad**

Press the **Unlk** softkey, then #.

**Place a Call**

1. To dial a number, follow any one of these sequences:
   - Press the **START** key, wait for a dial tone, then dial the number.
   - [Predial] Dial the number and then press the **START** key.
   - Press the **Spkr** softkey, then dial the number.
2. Listen for the ring to indicate the alerting of the called party.

Note: **Line 1** is the default line

**Place an Emergency Call**

(SpectraLink 8030 Wireless Telephone only)

The large button on the left side of the SpectraLink 8030 Wireless Telephone may provide you with either Emergency Dial or PTT as determined and activated by the system administrator.
Using the Basic Features of Your SpectraLink 8020/8030 Wireless Telephone

Press this button one time. If Emergency Dial is active, an explanatory message will be displayed.

When Emergency Dial has been enabled, the handset will dial an emergency number when it is pressed twice within two seconds. The number dialed may be found under the Config Menu>System Info option.

Caution! Emergency Dial will be inoperable if the wireless system or the call server fails for any reason. Do not rely on it as your sole method of emergency notification.

Answer or Reject a Call

When the handset rings, the incoming line’s icon number will flash and incoming call data will display.

To answer a call:

» Press the START key and hold the handset to your ear.

» Press the Spkr softkey and speak towards the handset.

When the call is answered, the call’s line number displays to indicate that this line is in an active call with established audio connection. The softkeys are locally programmed and may include those shown below.

Example:

```
| [From] |
| [time/date] |
```

To reject a call:

» Press the End softkey to silence the ring and allow the server to redirect the call to voicemail.

Place a Call on Hold/Resume Call
Press the **Hold** softkey. Press **Hold** again to resume audio.

**Answer a Second Call**

When an incoming call occurs during an active call, the handset will play the second call ringing sound until:

- the call is answered
- the first call is terminated
- the caller hangs up or
- the call is transferred to voicemail.

1. Press **START** or **Spkr** to place the current call on hold and answer the second call, or
2. Press **END** to reject the incoming call.

**Clear Forwarding on a Line**

1. Press **START** or select the line number from the Line menu.
2. Press **FCN**.
3. Select the **Set/Clear Forward** item from the menu and press **NavOK**.

**Redial the Last Number you Dialed**

From Standby mode:

1. Press **Nav** or **Nav** to navigate to the second set of softkeys.
2. Press the **Redl** softkey to display a list of the last 10 dialed numbers.
3. Select the number you wish to call from the list.
4. Press **START**.

**Silence the Ringing**

Press the **END** key to silence the external speaker ring.

External speaker ringing will resume when the next incoming call is received while the handset is in standby mode.
**Change the Ring Volume**

Press the up/down volume buttons on the side of the handset during ringing, or while the handset is in standby mode.

**Adjust the Speaker Volume**

While speakerphone is active, press the up/down volume buttons on the side of the handset during the call.
Adjust the Headset Volume

While the headset is plugged in, press the up/down volume buttons on the side of the handset during the call.

Mute/Unmute a Call

Press the Mute softkey. When the handset is muted, <Muted> appears on the status line. Press the Mute softkey again to restore audio pickup.

End a Call

Press the END key on the keypad to return to the standby mode.

Change the Profile

Press the Prof softkey and use the Nav ▲▼ keys to select a new profile while in standby mode. The selected profile is marked with an asterisk (*).

Open the Config Menu

Press the Cfg softkey from standby mode.

Turn on the Backlight

The backlight comes on when any key is pressed or when there is an incoming call, and stays on for 60 seconds. It turns off if another key is not pressed within that period.
Using the Advanced Features of your SpectraLink 8020/8030 Wireless Telephone

This chapter provides operating instructions for the advanced features of the SpectraLink 8020/8030 Wireless Telephone. This chapter contains instructions on:

- Multiple line appearances
- Listening to voicemail
- Activating installed custom applications
- Using the Phonebook and Speed dial

Place a Second Call

1. To get a dial tone for the second call, press **LINE** and navigate to the line you wish to use and press **START**.
   - The first call is automatically placed on hold.
   - The second call number is dialed.
   - The second call info appears in the display area.

2. Press **LINE** and the line number of the held call to toggle between calls.
Place a Call on a Different Line

1. Press the **LINE** key.
2. Navigate to the desired line and press **START**.

Listen to Voicemail

Voicemail may be locally available. If so, when the handset has a voicemail message, the voicemail icon may display.

1. Press **START**.
2. Press **FCN** to display softkeys programmed for locally-available feature activation.
3. Press the voicemail softkey and follow the directions. Contact your system administrator if you have questions about how to use voicemail.

Activate Installed Custom Applications

Some facilities may have advanced applications such as directory and text messaging or nurse call systems. These are accessed through the **FCN** key.

1. Press **START** or **Spkr**.
2. Press **FCN** to display softkeys programmed for locally-available feature activation.
3. Press the relevant softkey.
4. Follow the directions for feature activation (provided by the system administrator).

Use the Phonebook and Speed Dial

Press the **Phbk** softkey from standby mode.
Using the Advanced Features of Your SpectraLink 8020/8030 Wireless Telephone

The phonebook list is sorted alphabetically.

If present as shown above, the first item on the list will be a system-wide speed dial number programmed by the system administrator to be used for certain types of calls. Please contact your system administrator for more information.

The <new> option appears until the maximum number of entries (20) has been entered.

**Search for a phonebook entry**

Use Nav▲ and Nav▼ to scroll through the names or press the keys corresponding to the first letters of the name. Use Nav◄ and Nav► to edit the search characters as needed.

**View a phonebook entry**

Navigate to the name on the phonebook list and press NavOK.

The entry may be called, assigned a speed dial number or edited from this screen. If a speed dial number has been assigned to this name, it will appear beside spdl.

Return to the phonebook list by pressing the Back softkey or NavOK.
**Edit a phonebook entry**

1. Select the name to edit from the phonebook list.
2. Press the **Edit** softkey to open the **Enter Number** display and edit the existing number. Use the **Clr** and **Del** softkeys as needed.
3. Press **NavOK** to display the **Enter Name** display and edit the name.
4. Press **NavOK** to save the changes and exit the editing screens. Press the **Back** softkey to exit without saving the changes.

**Dial phonebook number**

Select the entry and press **START** or the **Spkr** softkey.

<table>
<thead>
<tr>
<th>Phonebook</th>
</tr>
</thead>
<tbody>
<tr>
<td>&gt; [special]</td>
</tr>
<tr>
<td>&lt;new&gt;</td>
</tr>
<tr>
<td>A Name</td>
</tr>

</tr>
<tr>
<td><strong>Spkr</strong></td>
</tr>
<tr>
<td><strong>Del</strong></td>
</tr>
<tr>
<td><strong>Edit</strong></td>
</tr>
<tr>
<td><strong>Back</strong></td>
</tr>
</tbody>
</table>

**Enter a new name and number in the phonebook**

1. Open the phonebook.
2. Select the `<new>` option (if available) and press the **Edit** softkey to open the **Enter Number** display.
3. Enter the name and number by following the steps for editing a name and number. You must enter alphanumeric characters for the name, not blank spaces.

**Delete a phonebook entry**

1. Open the phonebook and select the entry.
2. Press the **Del** softkey to delete the entry.

**Open the speed dial list from standby**

Press the **Spdl** softkey from standby mode.
Make a speed dial call

1. From standby or while in the speed dial menu, press and hold the corresponding number key on the keypad for one second. The system speed dial key must be pressed for three seconds.

2. The handset will display the name and number for one second before the call is dialed. You may press END during this second to terminate the call. (You may also use the Nav keys to highlight an entry and then press START or the Spkr softkey to dial the number.)

If you do not place a call, you may return to standby by pressing the Exit softkey.

Assign a speed dial number

A phonebook entry may be assigned to a speed dial key from the speed dial list or from the phonebook edit number display.

From the speed dial list:

1. Select the speed dial key that you wish to assign.

   Speed Dial Menu
   Assign to a key

   A Name
   B Name
   C Name

   Spkr  |  Set  |  Clr  |  Exit

2. Press the Set softkey to open the phonebook list.

3. Use the search routine or the Nav keys to select the desired entry.

   Phonebook
   Select name

   <new>

   A Name
   B Name

   Spkr  |  Del  |  Edit  |  Back

4. Press NavOK to assign the selected name to that speed dial key.

5. Press Exit to exit to standby.
From the phonebook view number display:

```
<table>
<thead>
<tr>
<th>Phonebook</th>
</tr>
</thead>
<tbody>
<tr>
<td>spdl [x]</td>
</tr>
<tr>
<td>[Name]</td>
</tr>
<tr>
<td>number</td>
</tr>
<tr>
<td>[Extension/number]</td>
</tr>
<tr>
<td>Spkr</td>
</tr>
</tbody>
</table>
```

1. Press the Spdl softkey from the view number display in the phonebook.
2. When the speed dial list opens, navigate to an empty slot and press NavOK. This sets the speed dial key to the number in the phonebook.
3. Press END to exit to standby mode and save the speed dial number assignment.

Speed dial entries may be edited through the phonebook, as described above.
Using the Push-to-Talk Features of your SpectraLink 8030 Wireless Telephone

The large button on the left side of the SpectraLink 8030 Wireless IP Telephone may provide you with either Emergency Dial or PTT as determined and activated by the system administrator. Press this button one time. If Emergency Dial is active, an explanatory message will be displayed. If PTT is enabled, channel information will be displayed.

The PTT feature allows SpectraLink 8030 Wireless Telephones to operate in a group broadcast mode called PTT mode. The handsets behave like walkie-talkies, where a single handset can transmit to multiple listeners. If the system administrator has disabled PTT, the PTT options will not appear in the Config menu.

Press and release the TALK button to display the default channel, the last channel used, any additional subscribed channels, and the Priority Channel.

Press and hold the TALK button to open the default PTT channel for transmission. Release the TALK button to end the transmission and await reply. The handset will wait for 10 seconds before reverting to standby mode.

PTT mode requires additional battery resources. Ensure your handset is equipped with an Extended or Ultra-Extended Battery Pack for optimal performance.

This chapter provides basic operating instructions for operating the PTT features of the SpectraLink 8030 Wireless Telephone. This chapter contains instructions on how to:

- Make a PTT call
- Respond to a PTT call
• End a wait period
• Select a different PTT channel
• End one PTT call and start another one
• Receive a PTT call while on a telephone call
• Transmit on the priority channel
• End a PTT call
• Change the PTT volume
• Answer a telephone call during a PTT transmission
• Start a telephone call during a PTT transmission
• Turn off PTT
• Subscribe to additional PTT channels

**Make a PTT Call**

To call on the default channel, from standby mode press and hold the **TALK** button. Wait for the display to show **Transmitting** and then hold the handset approximately two inches from your mouth and speak.

**Respond to a PTT Call**

Press and hold the **TALK** button during the 10-second wait period.

**End a Wait Period**

Press the **END** key.

**Select a Different PTT Channel**

Press and release the **TALK** button. Use the **Nav** keys or up/down side buttons to highlight the desired channel. Press **TALK** to transmit.

**End One PTT Call and Start another on a Different Channel**

Press the **END** key to exit the PTT call. Press and release the **TALK** button and select a different channel from the list. Press and hold the **TALK** button to begin transmitting on the different channel.
Receive a PTT Call while on a Telephone Call

Press the **END** key to end the telephone call. Now you can hear the PTT call.

Use PTT Vibrate

To enhance the alerting of a PTT call, **PTTVibrate** may be enabled on the **Config** menu.

When **PTTVibrate** is enabled, the handset will vibrate three times whenever a PTT broadcast is received, whether the handset is in standby or in a call. If in a call, the chirp alert will also sound. The vibration does not replace any PTT tone volume already set. To set the handset for PTT vibrate only, enable **PTTVibrate** and set the tone volume to zero.

**PTTVibrate** is disabled by default.

Transmit on the Priority Channel

Press and release the **TALK** button. Select the priority channel from the list. Press and hold **TALK**, then speak. The priority channel takes priority over all other calls in progress.

End a PTT Call

Press the **END** key to exit the PTT call.

Change the PTT Volume

Press the up/down volume buttons on the side of the handset while transmitting or receiving a PTT call.

Answer a Telephone Call during a PTT Transmission

Press the **START** key. PTT transmissions will be pre-empted by the telephone call.
Start a Telephone Call during a PTT Transmission

Press the **START** key and dial the number. PTT transmissions will be pre-empted by the telephone call.

Turn off PTT

Change to a different profile. (The **Silent** and **Vibrate** profiles disable PTT by default.)

Subscribe to additional PTT channels

Press the **Cfg** softkey to open the Config menu and select **Push-to-talk**. Select **Subscribed channels** and then select the channels you want to add. Subscribed channels are marked with an asterisk (*)

Charger Options

Charger Models

Three charger models are available for the SpectraLink 8020/8030 Wireless Telephone. The Single Charger will charge a single handset with an installed Battery Pack. The Dual Charger will charge the handset and a spare Battery Pack. The Quad Charger can charge up to four Battery Packs at a time. Any SpectraLink Battery Pack can be charged in any of these chargers.

The Single and Dual Chargers allow the handset to remain operative in speakerphone mode or with a headset while charging. Handsets may be charged while in standby mode, while in an active call, or while turned off.

Install the Charger

Set up the Charger by first obtaining the appropriate SpectraLink power supply for the country or region. Place the Charger on a flat, horizontal surface. Plug the power supply into the Charger and into an appropriate wall outlet.
Charging Status Indicators

The handset speaker, handset display, and the charger LED (on the Dual and Quad Chargers), indicate charging status or that a Battery Pack failure has been detected.

<table>
<thead>

The Single Charger is designed to allow the handset to remain operational through speakerphone or headset use while the handset’s Battery Pack is being charged. The handset may also be charged while it is in standby mode or turned off.

Place the handset in the Single Charger facing forward. While the handset is charging in standby mode, it will display its extension number and Charging…. An animated battery icon will indicate that charging is in progress. The handset is fully operational and will ring if called. When the handset is charging while turned off, only Charging… will display and no calls will be received. The dots will be racing during the charging cycle.

When the handset is fully charged, Charge Complete will display. No charging information will display during an active call.
The Dual Charger is designed to charge the Battery Pack in the handset while it remains operational and also charge an additional Battery Pack in the rear charging bay. The handset has charging priority when both slots are occupied.

Place the handset in the front slot, facing forward. The Battery Pack alone snaps into the charging bay as shown in the illustration.

The LED indicates the status of the Battery Pack in the rear bay. The handset displays its charging status as described for the Single Charger.

When the handset is fully charged or is removed, the Battery Pack will begin charging.

Note that the time it takes for the Battery Pack to charge will be lengthened if its charging cycle is interrupted for a handset to charge.
Quad Charger

The Quad Charger is designed to simultaneously charge four Battery Packs. It may be mounted on a horizontal or vertical surface.

The Battery Pack snaps into the charging slot. The LED above the occupied bay indicates the charging status of the Battery Pack in the bay.

A flashing LED may indicate a Battery Pack failure. Verify the condition of the Battery Pack by the following procedure before replacing it. First check the Battery Pack in a different bay or substitute another charger and repeat the operation that caused the failure. If the same Battery Pack lights a steady LED when inserted in a different bay or charger, the first charger may be faulty. Contact your system administrator for service information.
Cleaning and Drying the Handset

The SpectraLink 8030 Wireless Telephones have been tested for resistance to cleaning chemicals per IEC 60068-2-74 (1999). Exposure of the 8020/8030 handsets to Lysol® or diluted bleach poses little risk of functional or cosmetic damage.

- Avoid dropping the handset or knocking it against hard surfaces. Carrying the handset in a holster or carrying case will help protect it.

- There are no serviceable parts in the handset or chargers. You should not open the handset case nor disassemble the chargers. Doing so will void your warranty.

- Turn off the handset and unplug chargers before you clean them. Never immerse either in liquid. Clean the exterior surfaces, including the charging contacts, with a cloth that has been slightly moistened with water. Take care not to exert undue pressure on charger electrical contacts while wiping.

- Polycom recommends the use of a silicone cover to prolong the life of your handset, especially when it is dropped regularly or cleaned frequently with the disinfectants prescribed below.

- Wiping the handset surface with a water-dampened cloth or paper towel will remove most films or residues. If the soiling is too stubborn for plain water, a mild detergent solution, Lysol, isopropyl alcohol or diluted bleach may be used.

- Pre-treated cloths and toilettes, like those used for eyeglasses or cameras, may be used to clean the phone, however avoid using those containing lanolin or aloe as it will leave a slippery residue.

- When cleaning with disinfectants, do not rub the keypad characters vigorously. Doing so will degrade legibility of the handset’s keys.

- Do not directly spray or immerse the phone in a disinfectant or cleaning agent. Spray the disinfectant on a soft cloth or paper towel, then wipe the phone’s surface to dry it.
• The following products should NOT be used on the SpectraLink wireless telephones.
  – Do not use cleaning products containing quaternary ammonium compounds, such as CaviWipes™, CaviWipes™ XL, Cavicide® or Sani-Wipes®, Sani-Cloth, Super Sani-Cloth® and Sani-Cloth® Plus. Quaternary ammonium compounds have been laboratory tested and proven to damage the handset plastics.
  – Do not use furniture polishes, waxes or plasticizer based cleaner (ArmorAll®, etc.)
  – Do not use lanolin, aloe, glycerin or other skin care type products
  – Do not apply any solvent such as acetone, mineral spirits etc.

• Should the headset connector become dirty, a scratchy or intermittent signal may be experienced. To clean the connector, dip the non-padded end of either a wooden or paper handled cotton swab in isopropyl alcohol. Gently insert in the connector and twist, repeating several times. If available, blow compressed air into the connector to clear debris.

• Keep the headset jack covered when it is not in-use.

• Using a carrying case may help protect the surfaces and help prevent liquids (e.g., rain) from entering into the interior of the handset. This product is not waterproof, and exposing the unit to liquids may result in permanent damage to the unit.

If your wireless telephone interior gets wet, then do not try to accelerate drying with the use of an oven or a dryer as this will damage the wireless telephone and void the warranty. Instead, do the following:

1. Immediately power off the wireless telephone.
2. Remove Battery Pack from wireless telephone.
3. Shake excess liquid from the wireless telephone.
4. Place the wireless telephone and Battery Pack in an area that is at room temperature and has good airflow.
5. Let the wireless telephone and Battery Pack dry for 72 hours before reconnecting the Battery Pack and/or powering on the wireless telephone.

---

2 Quaternary ammonium compounds are also known as C12-18-alkyl [(ethylphenyl) methyl] dimethyl, chlorides and Benzyl-C12-18-alkyl(dimethyl) ammonium chlorides. Review the Materials Safety Data Sheet for your specific product to verify the chemical composition.
If the wireless telephone does not work after following the steps listed above, contact your dealer for servicing information.
Safety Information

Chargers and Battery Packs

It is normal for the Battery Pack to become warm when charging. Chargers operate in a 50° to 85° F (10° to 30° C) environment. Do not expose them to freezing temperatures or direct sunlight.

Do not place anything in the charger other than the handset or single Battery Pack as appropriate, to avoid bending the contacts. Bent contacts can keep the Battery Pack from charging.

Only use SpectraLink Battery Packs with SpectraLink chargers. Never use a non-SpectraLink charging unit as it could damage the Battery Pack.

Only use the original plug-in power adapter for the chargers.

Contact your service representative for assistance if you have a faulty Battery Pack or a problem with your charger.

Do not immerse the Battery Pack in water or throw into fire.

Do not throw away the Battery Pack with your domestic waste. Take used Battery Packs to an appropriate collection point for recycling or send them back to your supplier or servicing agent.

All batteries can cause property damage and/or bodily injury, such as burns, if a conductive material such as jewelry, keys, or beaded chains touches exposed terminals. The conductive material may complete an electrical circuit (short circuit) and become quite hot. Exercise care in handling any charged battery, particularly when placing it inside a pocket, purse, or other container with metal objects.
Wireless Telephones

WARNING: Changes or modifications to this equipment that are not approved by Polycom may cause this equipment to fail to comply with part 15 of the FCC rules, voiding the user’s authority to operate this equipment.

WARNING: Polycom products contain no user-serviceable parts inside. Refer servicing to qualified service personnel.

Operational Warnings

Potentially explosive atmospheres

Turn off your handset prior to entering any area with a potentially explosive atmosphere. Do not remove, install, or charge batteries in such areas. Sparks in a potentially explosive atmosphere can cause an explosion or fire resulting in bodily injury or even death.

Areas with potentially explosive atmospheres include fueling areas such as below decks on boats, fuel or chemical transfer or storage facilities, areas where the air contains chemicals or particles such as grain, dust, or metal powders, and any other area where you would normally be advised to turn off your vehicle engine. Areas with potentially explosive atmospheres are often posted, but not always.
Electromagnetic Interference and Compatibility

Nearly every electronic device is susceptible to electromagnetic interference (EMI) if inadequately shielded, designed, or otherwise configured for electromagnetic compatibility.

Facilities

To avoid electromagnetic interference and/or compatibility conflicts, turn off your handset in any facility where posted notices instruct you to do so. Hospitals or health care facilities may be using equipment that is sensitive to external RF energy.

Pacemakers

The Health Industry Manufacturers Association recommends that a minimum separation of 6 inches (15 cm) be maintained between a handheld, wireless-radio product and a pacemaker. These recommendations are consistent with the independent research by, and recommendations of, Wireless Technology Research. Persons with pacemakers should:

- ALWAYS keep the handset more than 6 inches (15 cm) from their pacemaker when the handset is turned on.
- Not carry the handset in a breast pocket.
- Use the ear opposite the pacemaker to minimize the potential for interference.
- Turn the handset off immediately if you have any reason to suspect that interference is taking place.

Hearing aids

Some digital wireless handsets may interfere with some hearing aids. The Phone Settings option—Use Hearing Aid—is designed to improve the audio for hearing aid users. If interference persists, you may want to consult your hearing-aid manufacturer to discuss alternatives.
Other medical devices

If you use any other personal medical device, consult the manufacturer of your device to determine if it is adequately shielded from external RF energy. Your physician may be able to assist you in obtaining this information.

Use While Driving

Campus installations and warehouse facilities that use vehicles such as forklifts or golf carts should abide by these guidelines when using wireless telephones:

- Give full attention to driving and to the road, aisle, or path.
- Use hands-free operation, if available.
- Pull off the road, aisle, or path and park before making or answering a call.

For vehicles equipped with an airbag

Do not place a portable device in the area over the airbag or in the airbag deployment area. An airbag inflates with great force. If a handset is placed in the airbag deployment area and the airbag inflates, the handset may be propelled at high speed and cause serious injury to occupants of the vehicle.

FCC Statement

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.
Specific Absorption Rate (SAR) Information

Your wireless telephone is a low power radio transmitter and receiver. When it is ON, it receives and also sends out radio frequency (RF) signals. In August 1996, the Federal Communications Commission (FCC) adopted RF exposure guidelines with safety levels for hand-held wireless phones. Those guidelines are consistent with the safety standards previously set by both U.S. and international standards bodies:

- ANSI C95.1 (1992) American National Standards Institute
- DHWC - Safety Code 6 Department of Health and Welfare Canada

Those standards were developed by independent scientific organizations through periodic and thorough evaluation of scientific studies. The standards include a substantial safety margin designed to assure the safety of all persons, regardless of age and health. The exposure standard for wireless mobile phones employs a unit of measurement known as the Specific Absorption Rate, or SAR. The SAR limit set by the FCC is 1.6W/kg.

In the United States and Canada, the SAR limit for mobile phones used by the public is 1.6 watts/kg (W/kg) averaged over one gram of tissue. The standard incorporates a substantial margin of safety to give additional protection for the public and to account for any variations in measurements.

Tests for SAR are conducted using standard operating positions specified by the FCC with the phone transmitting at its highest certified power level in all tested frequency bands. Although the SAR is determined at the highest certified power level, the actual SAR level of the phone while operating can be well below the maximum value. This is because the phone is designed to operate at multiple power levels so as to use only the power required to reach the network. In general, the closer you are to a wireless Base Station antenna, the lower the power output. Before a phone model is available for sale to the public, it must be tested and certified to the FCC that it does not exceed the limit established by the government-adopted requirement for safe exposure. The tests are performed in positions and locations
(e.g., at the ear and worn on the body) as required by the FCC for each model. While there may be differences between the SAR levels of various phones and at various positions, they all meet the government requirement for safe exposure.

The FCC has granted an Equipment Authorization for this model phone with all reported SAR levels evaluated as in compliance with the FCC RF emission guidelines.

SAR information on this model phone is on file with the FCC and can be found under the Display Grant section of http://www.fcc.gov/oet/ea after searching on FCC ID IYG702X or FCC ID IYG703X. Additional information on Specific Absorption Rates (SAR) can be found on the Cellular Telecommunications Industry Association (CTIA) web-site at http://www.ctia.org.

The only authorized headsets that may be utilized with the SpectraLink 8020 or 8030 handsets are those obtainable from Polycom or its reseller partners.

**Handset operation normal position**

Hold the handset as you would any other telephone, with the earpiece to your ear and speak into the microphone. The internal antenna is then positioned properly.
