

Test of modems for Spectralink DECT Server 2500 and 8000

A modem can be used to make calls to your Spectralink Server solution from a remote location. The modem is connected directly to the PBX and uses an analog telephone line.

Spectralink has tested two modems, but any standard modem is expected to work. See test results below

Spectralink DECT Server 2500 and 8000	USRobotics USR815668D	USRobotics USR025630D
Modem connects to server without configuration	Supported	Supported

Please note that Spectralink does not sell these modems nor provide any service related to these.
