Chapter 1: Introduction

Spectralink's Voice Interoperability for Enterprise Wireless (VIEW) Certification Program is designed to ensure interoperability and high performance between Spectralink Wireless Telephones and wireless LAN (WLAN) infrastructure products. The Cisco Meraki products listed have been tested in the Spectralink lab and found to be interoperable as noted. The settings in the Cisco Meraki [Wireless Voice Deployment Guide](#) were employed where possible.

Certified Product Summary

| | |
|---------------------|---|
| Manufacturer: | Cisco Meraki |
| Certified products: | Cisco Meraki Cloud-Controlled APs MR20, MR26, MR30H, MR32, MR33, MR34, MR36, MR42, MR45, MR46, MR52, MR53, MR55†, MR56†, MR70, MR72, MR74, MR84 |
| AP Radio(s): | 2.4 GHz (802.11b/g/n), 5 GHz (802.11a/n/ac) |
| Security: | None, WEP, WPA-PSK, WPA2-PSK, WPA2-Enterprise (EAP-FAST††, PEAPv0/MSCHAPv2, and PEAP) with OKC, 802.11r(FT-enabled) |
| QoS: | Wi-Fi Standard for Spectralink 84 series, PIVOT, Versity92/95/96 |
| Network topology: | Bridged |
| Version approved: | 25.3 and later |

† Only MR55 and MR56 were tested on Versity 92/95/96 Series smartphones

†† EAP-FAST is not supported on Versity 92/95/96 Series smartphones

| <i>Handset* models tested:</i> | <i>Spectralink</i> | | | <i>Smartphone (Versity)</i> |
|---|--------------------|-----------|-----------|-----------------------------|
| Handset radio mode: | 802.11b | 802.11b/g | 802.11bgn | 802.11a & 802.11an |
| Meets VIEW minimum call capacity per AP** | 8 | 8 | 8 | 10 |

| <i>Handset* models tested:</i> | <i>Spectralink</i> | | | <i>Smartphone (PIVOT)</i> |
|---|--------------------|-----------|-----------|---------------------------|
| Handset radio mode: | 802.11b | 802.11b/g | 802.11bgn | 802.11a & 802.11an |
| Meets VIEW minimum call capacity per AP** | 8 | 8 | 8 | 10 |

| <i>Handset models tested:</i> | <i>Spectralink</i> | | | <i>Wireless Telephone (84-Series)</i> |
|-------------------------------|--------------------|-----------|-----------|---------------------------------------|
| Handset radio mode: | 802.11b | 802.11b/g | 802.11bgn | 802.11a & 802.11an |

| <i>Handset models tested:</i> | <i>Spectralink</i> | | | <i>Wireless Telephone (84-Series)</i> |
|---|--------------------|---|---|---------------------------------------|
| Meets VIEW minimum call capacity per AP** | 8 | 8 | 8 | 10 |

*Spectralink handset models and their OEM derivatives are verified compatible with the WLAN hardware and software identified in the table. Throughout the remainder of this document they will be referred to collectively as "Spectralink Wireless Telephones", "phones" or "handsets".

** Maximum calls tested per the VIEW Certification Test Plan. The certified product may actually support a higher number of maximum calls.

Known Limitations

- Cisco Meraki products are controlled from the Meraki dashboard. This means that access to the internet is necessary for product configuration. In general, the APs continue to provide service when disconnected from the Internet. When the internet is unavailable, operation limitations are described in [AP Connection Loss to Cisco Meraki Cloud](#).
- The Cisco Meraki system was tested with its default system of multicast-to-unicast. To facilitate group announcements through PTT (Push-to-talk), the number of access points and phones must support a one-way call to every phone at the same time.
- Cisco Meraki access points do not provide the WMM-AC feature using TSPECs to ensure voice quality.
- Cisco Meraki recommends no more than 3 SSIDs to be enabled on any one AP.
- Fast Transition roaming using adaptive mode (802.11r) is implemented in the Versity 95/96 smartphones as of R2.1.1. SSIDs are compatible with all models if FT is enabled and multiple radio buttons are checked in the WLAN>Security section, as described in this manual.

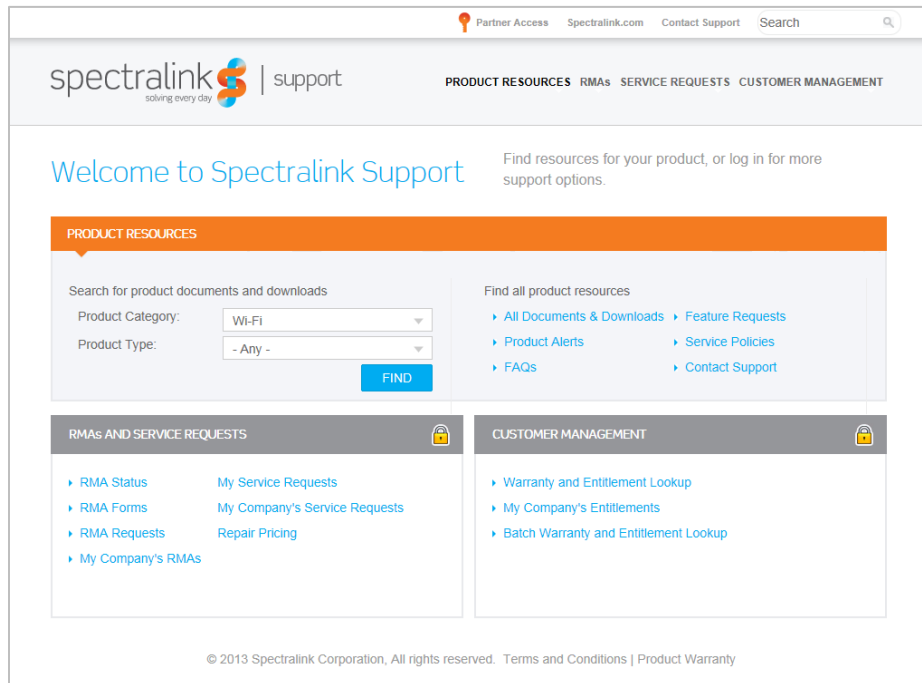

Ensure FT is set to enabled on the VQO app to gain 802.11r functionality.

CCKM is not supported by Cisco Meraki Access Points.

Versity 92 supports FT but does not support 802.11r Adaptive. However it is compatible with it in that it will use legacy roaming mechanism when Adaptive is enabled.

Spectralink References

Spectralink documents are available at <http://support.spectralink.com>.

To go to a specific product page:

Select the Product Category and Product Type from the dropdown lists and then select the product from the next page. All resources for that particular product are displayed by default under the All tab. Documents, downloads and other resources are sorted by the date they were created so the most recently created resource is at the top of the list. You can further sort the list by the tabs across the top of the list to find exactly what you are looking for. Click the title to open the link.

Support Documents

Spectralink Versity software and support documents are available on the Spectralink support site at <http://support.spectralink.com/versity>.

PIVOT by Spectralink Configuration Guide The PIVOT Configuration Guide provides detailed information about PIVOT menu items that have been developed specifically for the PIVOT handset.

Spectralink 87-Series Wireless Telephone Deployment Guide The Deployment Guide provides sequential information for provisioning and deploying the handsets. It covers deployment using the SLIC tool and CMS as well as manual deployment.

The *Spectralink 84-Series Wireless Telephone Administration Guide* provides a comprehensive list of every parameter available on Spectralink 84-Series Wireless Telephones.

The *Spectralink 84-Series Deployment Guide* is your essential reference for provisioning and deploying Spectralink 84-Series handsets in any environment.

The *Web Configuration Utility User Guide* explains how to use a web browser to configure the Spectralink 84-Series handsets on a per handset basis.

Best Practices for Deploying Spectralink 87-Series Handsets provides detailed information on wireless LAN layout, network infrastructure, QoS, security and subnets.

White Papers

Spectralink White Papers are available at <http://www.spectralink.com/resources/white-papers>.

For the Spectralink 84-Series Wireless Telephones, please refer to *Best Practices Guide for Deploying Spectralink 84-Series Handsets* for detailed information on wireless LAN layout, network infrastructure, QoS, security and subnets.

For additional details on RF deployment please see *The challenges of ensuring excellent voice quality in a Wi-Fi workplace* and *Deploying Enterprise-Grade Wi-Fi Telephony*.

These White Papers identify issues and solutions based on Spectralink's extensive experience in enterprise-class Wi-Fi telephony. It provides recommendations for ensuring that a network environment is adequately optimized for use with Spectralink Wireless Telephones.

Product Support

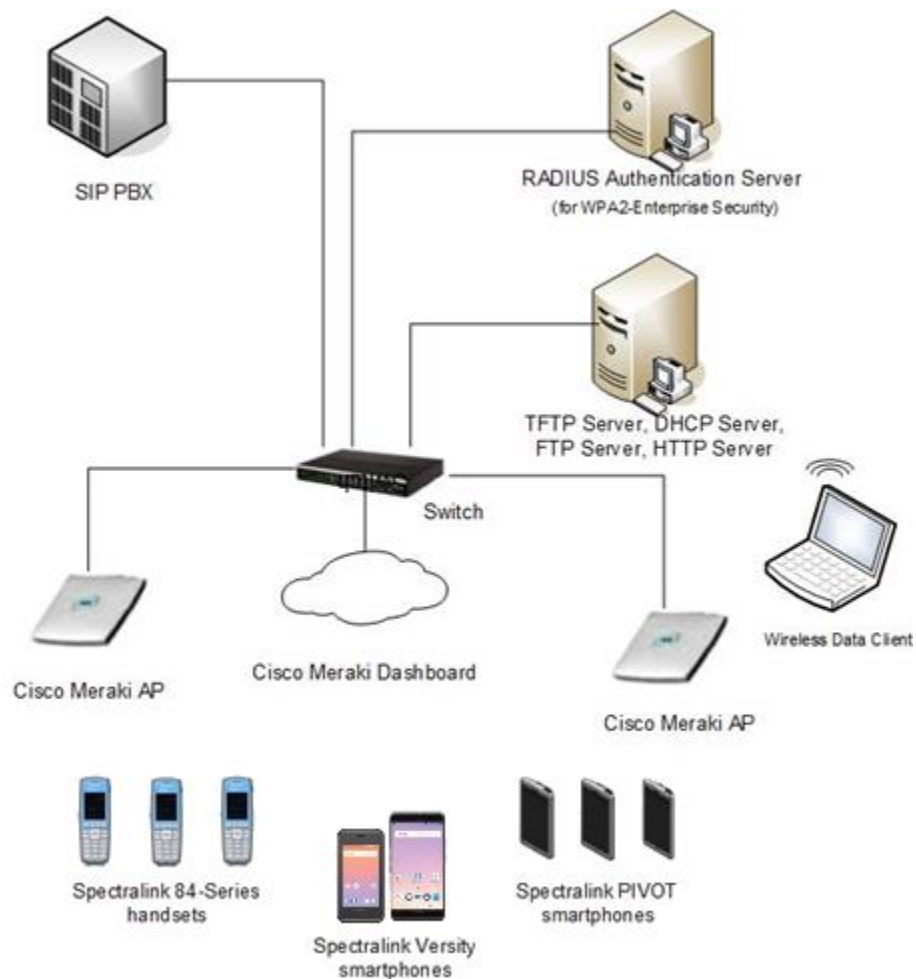

Spectralink support can be reached at support.spectralink.com.

Cisco Meraki support can be reached from the dashboard at <https://dashboard.meraki.com> from the help dropdown menu. Support may be reached at <https://meraki.com.com/support> prior to obtaining a dashboard login.

Chapter 2: Overview

The following configuration was tested during VIEW certification.

Network Topology

Note: Example configuration shown

This is a modified diagram and not all components are shown for every system type.

Note: Radius server setup

The setup for a Radius server for Enterprise security is outside the scope of this document. Helpful setup documents for using a Cisco Meraki cloud-based Radius server and external servers are available on the Cisco Meraki website.

Chapter 3: Initial Network Creation

Initial network setup is performed when APs and cloud support are purchased from Meraki. The dashboard is used to log in, licenses are added, a network is created, and APs are added to the network.

Note: Use an incognito window

An “incognito window” must be used with some web browsers to avoid confusing field entry behavior. Touch the browser “More” menu (3 vertical dots) and select “Use an incognito window”.

Login and Licensing

- 1 Navigate to <https://dashboard.meraki.com> for an initial login. Examine the e-mail received from Meraki to obtain the e-mail and password created for the login. Enter these values into the screen shown.

Dashboard Login

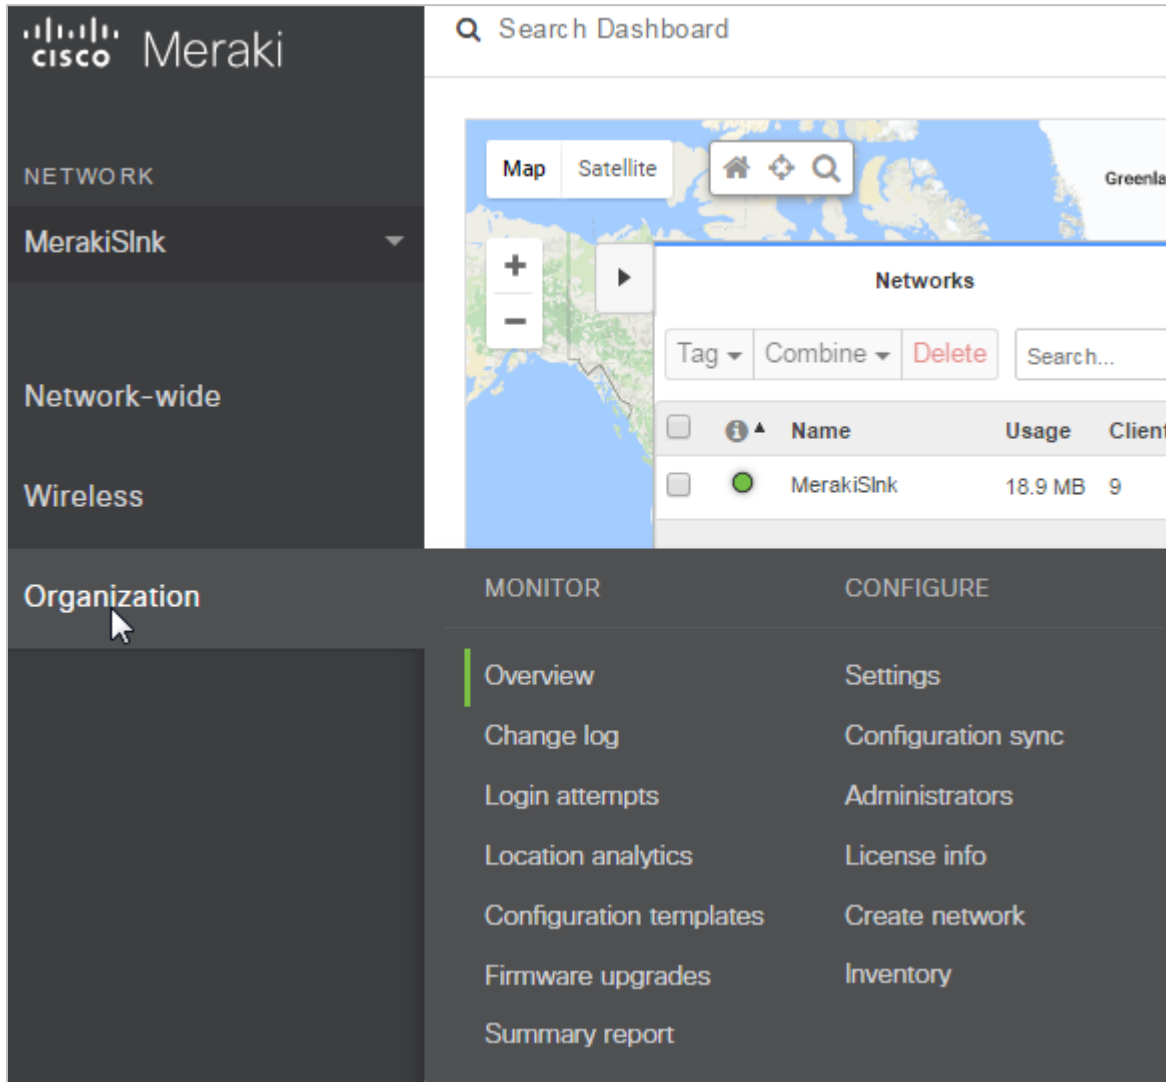

Email

Password

Log in Stay logged in

[I forgot my password](#) | [Create an account](#)

- 2 On the dashboard, navigate to **Organization**> **CONFIGURE**> **License info**.

3 Enter the license keys and functions received from Meraki to activate the system.

License information

License status **Ok**

License expiration ⓘ Jul 6, 2019 (759 days from now)

Create a Network

Create a network to organize the APs.

- 1 Navigate to **Organization>CONFIGURE>Create network**.

On the **Create network** screen:

- 2 Enter a name for the network
- 3 Choose **Combined hardware** for the network type (laptops and phones will both be in the network).
- 4 Start with the **Default Meraki configuration**. If another network exists, it can be cloned to copy SSID definitions and settings if desired.

Create network

Setup network

Networks provide a way to logically group, configure, and monitor devices. This is a useful way to separate physically distinct sites within an Organization. ⓘ

Network name

Network type

 ⓘ

Network configuration

 Default Meraki configuration Bind to template No templates to bind to ⓘ Clone from existing network

Add APs to the Network

Now that the network has been created, APs need to be added to the system.

The devices are selected using the lower part of the **Organization > CONFIGURE > Create network** screen.

1 Click **Add devices**.

Select devices from inventory

Check the devices in your inventory you'd like to add to this network.

Add devices

Chapter 4: Configure Wireless

The wireless settings are configured by defining the SSIDs and then the radio settings on the APs.

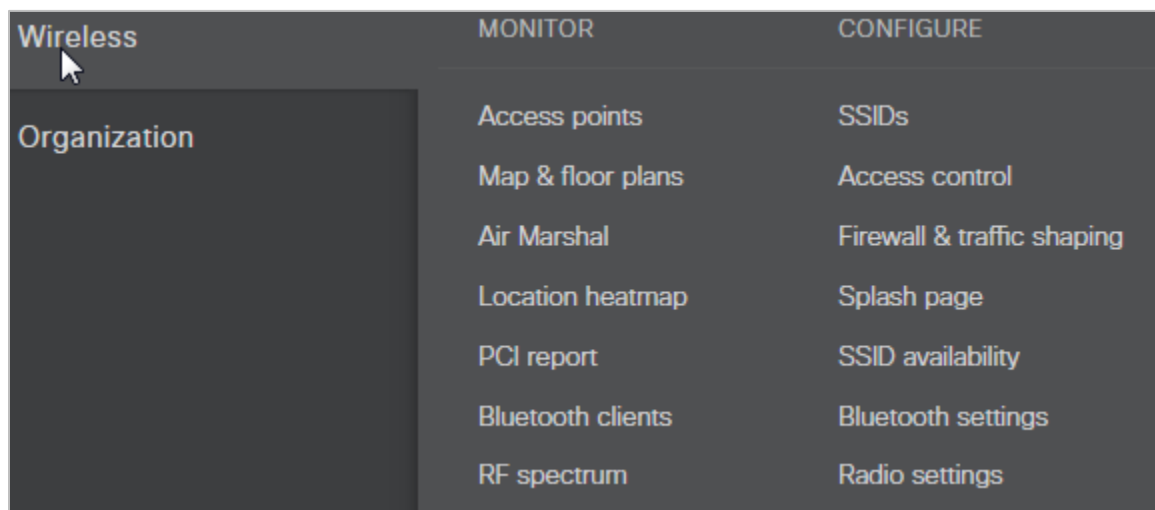

Define the SSIDs

Note: 3 enabled SSIDs per AP recommended

Cisco Meraki recommends enabling a maximum of 3 SSIDs per AP.

- 1 Navigate to **Wireless> CONFIGURE> SSIDs**.

Configuration overview

(Please allow 1-2 minutes for changes to take effect.)

- 2 Click **rename** on one of the Unconfigured SSID definitions. Enter the SSID name entered on the handsets. Click **Save Changes**.

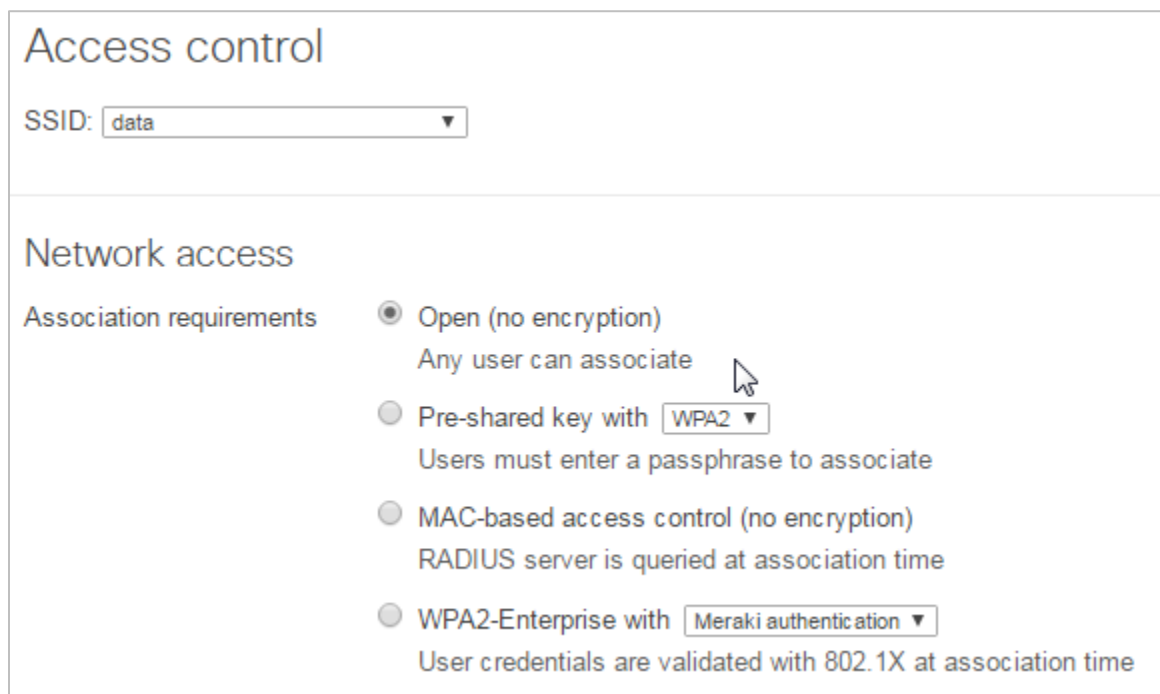

Access control

The **Access control** settings for an SSID vary depending on the type of security desired.

No security

- 1 For no security, click on the **Open** radio button.

WEP

Note: WEP is insecure

Spectralink and Meraki do not recommend the user of WEP security due to its security weaknesses.

Note: Only one WEP SSID per network.

Cisco Meraki software only allows one enabled WEP SSID per network.

- 1 Select the **Pre-shared key with** and choose **WEP** from the dropdown menu.
- 2 Enter a 10 or 26 hex character key in the **User must enter this key to associate** box. This same key must be entered in the WEP key fields on the phones.

Network access

Association requirements

- Open (no encryption)
Any user can associate
- Pre-shared key with WEP ▾
Users must enter this key to associate: Hide key
- MAC-based access control (no encryption)
RADIUS server is queried at association time
- WPA2-Enterprise with my RADIUS server ▾
User credentials are validated with 802.1X at association time

WPA2-PSK

- 1 Select the **Pre-shared key with** and choose **WPA2** from the dropdown menu.
- 2 Enter an ASCII passphrase in the **User must enter this key to associate** box. This same key must be entered in the password or passphrase fields on the phones.

Access control

SSID:

Enterprise securities (PEAP, EAP-TLS, EAP-FAST††)

†† EAP-FAST is not supported on Versity 92/95/96 Series smartphones

Note: Radius server setup

The setup for a Radius server for Enterprise security is outside the scope of this document. Helpful setup documents for using a Cisco Meraki cloud-based Radius server and external servers of various types are available on the Cisco Meraki website.

- 1 Choose the radio button WPA2-Enterprise.
- 2 Choose **my Radius server** from to dropdown box to enter an external Radius server or **Meraki authentication** to use Meraki cloud-based authentication services.

Note: Meraki cloud-based authentication services not tested

The Meraki authentication option was not tested by Spectralink during VIEW program testing.

- 3 Leave the 802.11r and 802.11w settings set to Disabled.

Note: 802.11r is supported

An unexpected anomaly in Android 10 created an incompatibility in Fast Transition, Adaptive mode which has been corrected in Versity R2.2.1.x

SSID common settings (applied to all security types)

- 1 Select the **Bridge mode** in the **Addressing and traffic** part of the page.

Addressing and traffic

Client IP assignment

- NAT mode: Use Meraki DHCP
Clients receive IP addresses in an isolated 10.0.0.0/8 network. Clients cannot communicate with each other, but they may communicate with devices on the wired LAN if the [SSID firewall settings](#) permit.
- Bridge mode: Make clients part of the LAN
Meraki devices operate transparently (no NAT or DHCP). Clients receive DHCP leases from the LAN or use static IPs. Use this for shared printers, file sharing, and wireless cameras.
- Layer 3 roaming
Clients receive DHCP leases from the LAN or use static IPs as in bridge mode. If they roam between APs their traffic will be forwarded to an AP on the same subnet they originally joined, so they will keep the same IP address.
- Layer 3 roaming with a concentrator
Clients are tunneled to a specified VLAN at the concentrator. They will keep the same IP address when roaming between APs.
- VPN: tunnel data to a concentrator
Meraki devices send traffic over a secure tunnel to an MX concentrator.
Note: VPN and Layer 3 roaming with concentrator require an MX. [Add an MX](#) to use them.

- 2 As recommended by Cisco Meraki [Wireless Voice Deployment Guide](#), in the **Wireless options** section for SSIDs to be used primarily for voice, set the Minimum bitrate to 11 Mbps. Note: the Spectralink phones are 802.11g devices, so the 11 Mbps rate was left enabled.

Wireless options

Band selection

- Dual band operation (2.4 GHz and 5 GHz)
- 5 GHz band only
5 GHz has more capacity and less interference than 2.4 GHz, but legacy clients are not capable of using it.
- Dual band operation with Band Steering
Band Steering detects clients capable of 5 GHz operation and steers them to that frequency, while leaving 2.4 GHz available for legacy clients.

Minimum bitrate (Mbps)

Lower Density Higher Density

1 2 5.5 6 9 11 12 18 24 36 48 54

No connectivity for some 802.11b devices

Traffic shaping

As recommended in the Cisco Meraki [Wireless Voice Deployment Guide](#), the voice network was found to have better performance when the following traffic shaping procedures were followed.

- 1 Navigate to **Wireless> CONFIGURE> Firewall & traffic shaping**.
- 2 Select each SSID that will have voice traffic, one at a time, from the dropdown list by **SSID**.
- 3 Set the Per-client bandwidth limit to 5 Mbps.
- 4 Check the radio button to **Enable SpeedBurst**.
- 5 Ensure that the **Per-SSID bandwidth limit** is set to unlimited.
- 6 Ensure that **Shape traffic** is set to **Shape traffic on this SSID**.
- 7 For a VLAN that has no tagging, the **PCP** is not able to be tagged.
- 8 Set the **DSCP** tagging to 56 or whatever voice and video should have for the call server the phones are using.

Assigning SSIDs to Access Points

All SSID's that are enabled are assigned to all SSID's in the network by default.

If it is desired to have some SSID's present on only some access points, the access points may be tagged.

- 1 Navigate to **Wireless> MONITOR> Access points**.
- 2 Check the box(es) of the AP(s) you'd like to tag.
- 3 Select **Tag** from the **Edit** dropdown list.
- 4 In the **Add** box, enter a name for the tag you are creating. (Similarly, tags can be removed if desired.)

Access points for the last day [View old version](#)

Edit 3 access points: 3 checked Add APs Download As

| MAC address | Model | Connectivity |
|-------------------|-------|---|
| e0:55:3d:f3:eb:ec | MR33 | <div style="width: 100%; height: 10px; background-color: green;"></div> |
| 00:18:0a:2b:33:20 | MR32 | <div style="width: 100%; height: 10px; background-color: green;"></div> |
| 00:18:0a:79:3d:59 | MR18 | <div style="width: 100%; height: 10px; background-color: grey;"></div> |

Add:

Remove:

- 5 Navigate to **Wireless> CONFIGURE> SSID availability**.
- 6 Select each AP in turn from the dropdown list.
- 7 If desired, set the **Per-AP availability** to **This SSID is enabled on some APs**.
- 8 Enter the tags to select the correct APs from the dropdown list in the **Only enable on APs with any of the following tags:** box.
- 9 Click on the **Save Changes** box.

SSID availability

SSID:

Visibility

Per-AP availability ⓘ

Only enable on APs with any of the following tags:

1 AP matched

Scheduled availability

or [cancel](#)

(Please allow 1-2 minutes for changes to take effect.)

Radio settings

The radio settings for each AP must be set.

- 1 Navigate to **Wireless> CONFIGURE> Radio settings**.
- 2 Click on an access point name in the list.

Channel planning

Country United States

Regulatory domain FCC

Radio power Enable automatic power reduction

Auto channel Allow DFS channels

Default 5GHz channel width 20 MHz

List Map 2.4 GHz 5 GHz
Search radios
Update auto channels
Hide transmit circles

| Access point [▲] | Radio # | Model | Band | Channel [?] | Transmit power [?] | Channel width [?] | Max neighbor RSSI | Max rogue RSSI |
|---------------------------|---------|-------|---------|----------------------|-----------------------------|----------------------------|-------------------|----------------|
| Meraki18 | 1 | MR18 | 2.4 GHz | 11 (Auto) | Off | 20 MHz (Auto) | — | — |
| Meraki32 | 1 | MR32 | 2.4 GHz | 6 (Auto) | Off | 20 MHz (Auto) | — | 15 |
| Meraki33 | 1 | MR33 | 2.4 GHz | 1 | Off | 20 MHz (Auto) | — | 27 |

Click on an access point to configure its radio settings.

- 3 Click the 2.4 GHz or 5 GHz tab in the heading of the list as necessary.

- 4 From the settings list that appears on the right, choose channels and power settings as desired.

| Access point | Radio # | Model | Band | Channel | Transmit power | Channel width | Max neighbor RSSI | Max rogue RSSI |
|--------------|---------|-------|---------|-----------|----------------|---------------|-------------------|----------------|
| Meraki18 | 1 | MR18 | 2.4 GHz | 11 (Auto) | Off | 20 MHz (Auto) | — | — |
| Meraki32 | 1 | MR32 | 2.4 GHz | 6 (Auto) | Off | 20 MHz (Auto) | — | 15 |
| Meraki33 | 1 | MR33 | 2.4 GHz | 1 | Off | 20 MHz (Auto) | — | 27 |

Meraki32
MR32

Channel width
5 GHz: 80 MHz

Radio 1 (2.4 GHz)
Channel: Auto
Power: Off

Radio 2 (5 GHz)
Channel: 100
Power: 5 dBm
Overlaps channels 100 to 112

Note: Actual channel may be different than the manual channel setting

Due to radar or interference detection, the system may change the AP's channel.

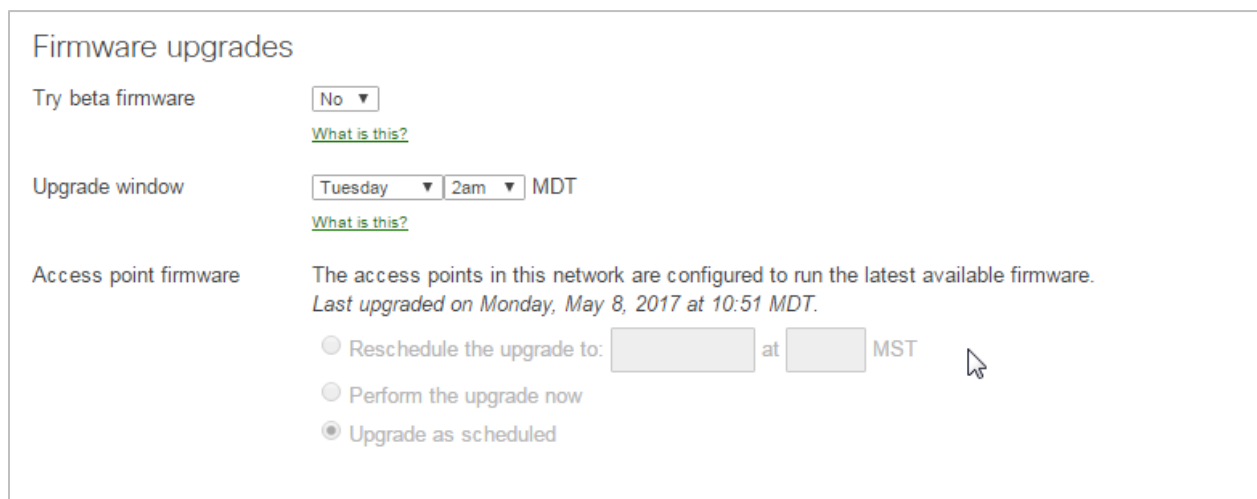

The actual channel of an AP may be viewed by navigating to **Wireless > MONITOR > Access points** and clicking on the name of an access point.

Chapter 5: Firmware Upgrades

Cisco Meraki strives to minimize the administrative overhead of its systems. One of the ways this is accomplished is by centrally managing the software upgrade process.

- 1 To set up the timing of the upgrade, navigate to **Network-wide> CONFIGURE> General**.
- 2 Scroll to the **Firmware upgrades** sections and enter settings as desired. More information about this feature is available on [CiscoMerakiFirmwareFAQ](#).

Note that the time of the last upgrade is displayed.

The screenshot shows the 'Firmware upgrades' configuration page. It includes three main sections: 'Try beta firmware' with a dropdown set to 'No' and a 'What is this?' link; 'Upgrade window' with dropdowns for 'Tuesday', '2am', and 'MDT', and another 'What is this?' link; and 'Access point firmware' with a status message: 'The access points in this network are configured to run the latest available firmware. Last upgraded on Monday, May 8, 2017 at 10:51 MDT.' Below this are three radio button options: 'Reschedule the upgrade to: [] at [] MST', 'Perform the upgrade now', and 'Upgrade as scheduled' (which is selected).

- 3 To see the currently installed firmware version and determine which version changes are available, navigate to **Organization> Firmware upgrades** and choose the tab **All networks**. The use of this screen is described in [Managing Firmware Upgrades](#).
